# Traffic Fatality Patterns in the United States, 2011–2020

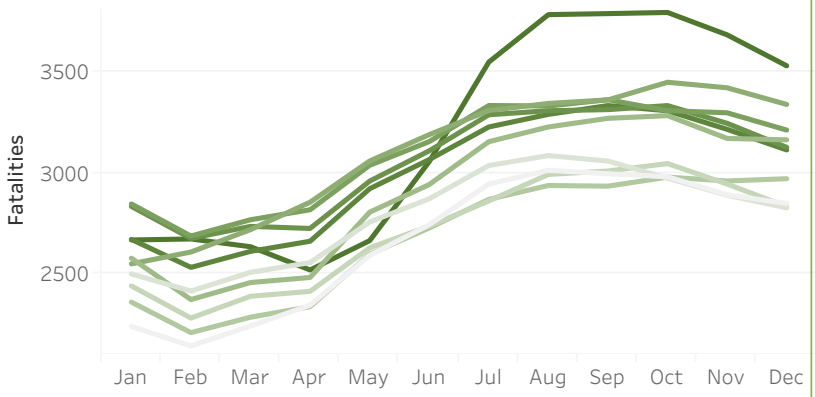

## Total Fatal Crashes in the United States, 2011–2020

## 2020 Fatalities per 100,000 Residents

## Fatal Crashes by Month Across All Years

This dashboard presents fatal crash patterns in the United States from 2011 to 2020 using data from the National Highway Traffic Safety Administration's Fatality Analysis Reporting System (FARS). By combining crash records with U.S. Census population estimates, the dashboard allows for comparisons across states and years.

The first visualization shows total fatal crashes in the U.S. by year, providing a broad view of national trends over the decade. The second visualization focuses on seasonality, displaying monthly fatal crashes across all years to highlight recurring patterns in timing. The third visualization examines differences across states with a heat map of drunk-driving fatalities, where darker shades represent higher values. Two filters allows users to adjust the view by state and year.

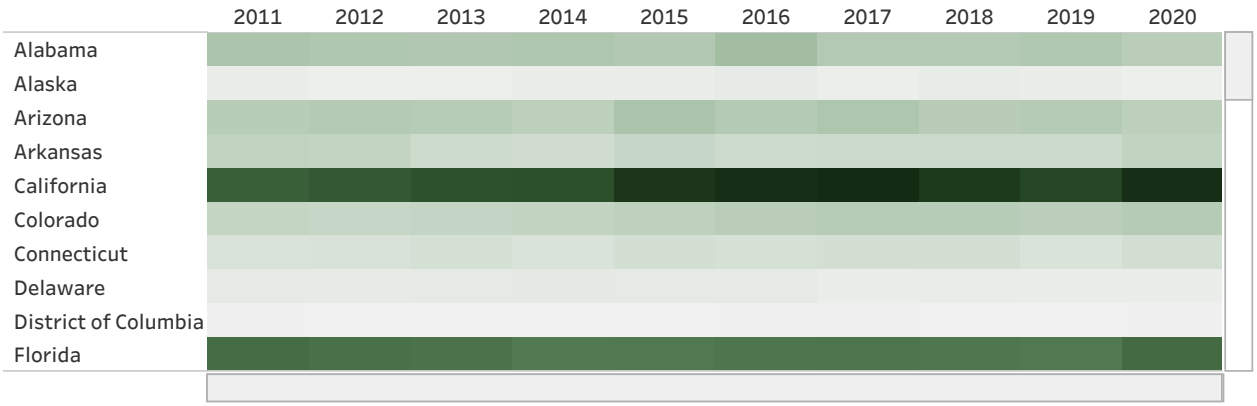

Together, these displays offer a clear summary of when and where fatal crashes occur most often, with attention to population differences and impaired-driving outcomes.
